## Converting Input Strings

Write a program to convert strings to an integer and float and display its type.

*Sample Input:*

10

10.9

*Sample Output:*

10,<class 'int'>

10.9,<class 'float'>

**For example:**

Input	Result
10	10,<class 'int'>
10.9	10.9,<class 'float'>

```
a=int(input())
```

```
b=float(input())
```

```
b=round(b,1)
```

```
print("{} {}".format(a,type(a)))
```

```
print("{} {}".format(b,type(b)))
```
